

Streptavidin-HRP (Goat IgG) kit

Streptavidin-HRP Assay is specially designed for displaying the distribution of antigens on tissues and cells in immunochemistry and other immunodetection analyses. Streptavidin is a kind of protein which extracted from Streptomyces and it has a high affinity with biotin. The isoelectric point of streptavidin is closed to neutral, the nonspecific adsorption for tissue and cell is low so the background of immunohistochemical method based streptavidin is low too. This kit is used on primary antibodies from Goat; the compnents supplied in this kits are suffient for 100-200 assay.

Catalog No.	504401
Size	Kit
Product Category	Immuno Detection
Kit Components	1) Rabbit anti-Goat IgG: 30uL 2) HRP-Streptavidin concentrate: 30uL 3) Blocking solution (normal goat serum): 3mL 4) H2O2 (3%): 3mL 5) Antibody Diluent: 10mL 6) 20x DAB Solution-A: 0.3mL 7) 20x DAB Solution-B: 0.3mL
Storage/Stability	-20°C / 1year
