

RPMI-1640 (w/o L-glutamine, Phenol red, Sodium Pyruvate, HEPES)

alpha-MEM medium is a modified from MEM. Compared with MEM medium, alpha-MEM is added with sodium pyruvate, zinc sulfate, vitamin B12, biotin, ascorbic acid and other ingredients, and is widely used in the cultivation of various mammalian suspension and adherent cells. alpha-MEM is divided into two types: nucleosides and non-nucleosides.

alpha-MEM without nucleosides and deoxynucleosides is often used as a selection medium for DG44-deficient cells.

Catalog No.	581014
Size	500mL
Product Category	Cell Culture Media
Storage/Stability	2 ~ 8°C/1 year
Shipping	Ambient
