

Formalin Alcohol Fixative

The purpose of fixation is to preserve the original morphological structure of cells and tissues, and the fixative can prevent endogenous lysosomal enzymes from autolyzing their own tissues and cells, and inhibit the growth of bacteria and molds. The fixative changes the internal structure of the protein by coagulation, formation of additive compounds, etc., thereby inactivating the enzyme.

Formalin Alcohol fixative is a dehydration-crosslinking compound fixative, which can produce excellent results in immunohistochemical reactions for identifying specific antibodies, and is also beneficial for fixing large samples containing a lot of fat.

Catalog No.	505054
Size	500mL
Product Category	Immuno Reagent
Storage/Stability	2 ~ 8°C/1 year
Shipping	Ambient
