

TriColor Prestained Protein Ladder [8 ~ 250 kDa; 10 bands]

TriColor Prestained Protein Ladder [8 ~ 250 kDa] is a tri-color pre-stained ready-to-use protein molecular weight standard that contains 11 known molecular weight pre-stained standard proteins with a molecular weight range of 8~250 kDa. After SDS-PAGE gel electrophoresis or Western blot transfer, clear 11 colored protein bands can be observed, with the 72 kDa band appearing orange-red, the 8 kDa band appearing green, and the remaining 9 bands appearing blue.

Catalog No.	502012
Size	50 Loads
Product Category	Protein Ladders
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
