

TriColor Prestained Protein Ladder [5 ~ 245kDa; 13 bands]

TriColor Prestained Protein Ladder [5 ~ 245 kDa] is a tri-color pre-stained ready-to-use protein molecular weight standard that contains 13 known molecular weight pre-stained standard proteins with a molecular weight range of 5~245 kDa. After SDS-PAGE gel electrophoresis or Western blot transfer, clear 13 colored protein bands can be observed, with the 70 kDa band appearing orange-red, the 25 kDa band appearing green, and the remaining 11 bands appearing blue.

Catalog No.	502002
Size	50 Loads
Product Category	Protein Ladders
Storage/Stability	-20°C/1 year
Shipping	Gel Packs
