

PAGE-Gel Protein Recovery Kit

This kit is designed to detect the relative molecular mass of proteins, but it is also an important tool for separation and purification of proteins. With the micro-quantification of protein technology, it is necessary to recover proteins from gels for antibody preparation, immunoblotting, amino acid group composition. PAGE-GEL Protein Recovery Kit is specially developed to recover proteins from gels .

Client Features:

1. Simple, no complicated and expensive instruments (such as electro-eluting instruments) are required.
2. It is suitable for denaturing gel (SDS-PAGE) and non-denaturing gel (Native-PAGE).
3. The recovery rate is generally between 50-80% (related to protein size and elution time).
4. Compatible with subsequent experiments, including 1-D, 2-D electrophoresis, and mass spectrometry sequencing.

Catalog No.	501010
Size	20 preps
Product Category	Protein Extraction
Storage/Stability	2 ~ 8°C/1 year
Shipping	Gel Packs
